

Reduce - Reuse - Recycle

Even the packaging affects the environment – in more ways than the obvious. The need to manufacture new products to replace items damaged during transport or storage, usually results in a very high environmental impact. Maximised filling ratio of containers and optimised logistics reduce transport. Thus, the first goal of Wellplast AB's packaging design team is function. Goal two is to minimize the amount of material in each solution and to replace single-use packaging with durable solutions that can be reused over and over again. Our sales representatives have the expertise to guide the customer in terms of logistics and waste management. Next to reuse of packaging, we have a strong focus on recycling. Wellplast AB today recovers close to 100% of all production waste for new materials and we also offer our customers a program to buy back used packaging.

Sustainable

- ✓ Superb protection
- ✓ Low weight
- ✓ Low on resources
- ✓ Reusable
- ✓ **100%** Recyclable
- ✓ High energy content
- ✓ Buy back program

Wellplast AB buys back used packaging

To secure access to good raw material and to increase the recovery of Wellplast® packaging, a repurchase program has been started. This means we buy back used packaging. The packaging is washed and grinded so the material can be used in the production of Wellplast®R (Recycled). It is important that the sorting works well and the filling rate of the used packaging is good enough for an environmentally efficient transport to us.

Wellplast® Buy Back Program

How does it work?

Collect and pack the material you are aiming to recycle. Do not mix different products and make sure there are no paper or any other foreign materials.

Send an e-mail to buyback@wellplast.se with information of how much packaging you will send and when you will send it.

When it arrives we will weigh it and send you a receipt of the weight and how much it is worth.

You can then send us an invoice for that amount.
